

**A Unique Collection**

This CD volume contains 87 of the best examples of cartographic embellishments from fine maps and atlases made over a 200+ year period.

Images selected for this collection include: sailing ships, compass roses, globes, armillary spheres, mythological figures, planetary diagrams, fantasy sea monsters, navigational instruments, elaborately designed cartouches and heraldry. The illustrations have been isolated from their original context, greatly enhanced and often outlined.

**Production Excellence**

Visual Language® has taken extra care to provide digital imagery with the extensive detail and clarity of the original antiquarian source material.

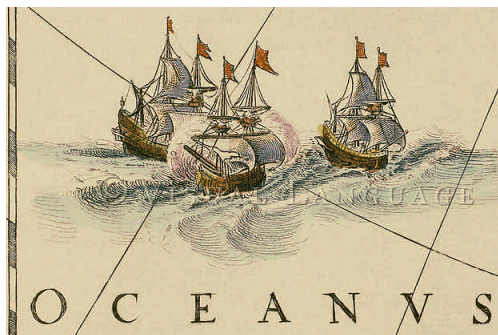

Original maps and motifs were photographed then individually drum scanned, meticulously retouched, color balanced and expertly enhanced to deliver the highest possible image quality.

Most of the images include a hand-edited clipping path.

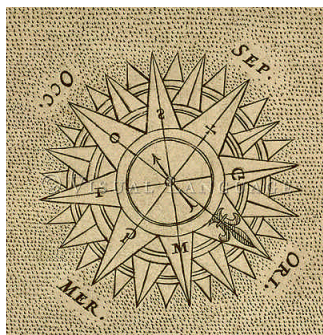

**File Formats**

The 87 digital images are each provided in three resolutions. The high resolution images are 300 dpi and range in size from 9-30MB RGB. Medium resolution images range in size between 5MB and 15MB. Low resolution files are 72 dpi and are approximately 500k.

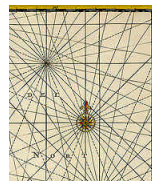

The Extensis Portfolio Catalog has been included. With keyword search capability, this catalog provides quick and easy access to all the images.
